

Study Life Science Innovation Master of Science in Sigmaringen

What can I expect?

Do you want to develop or improve products and processes in the life science industry? Life Science Innovation optimally prepares you for your dream job in product or process design. In this research-oriented master's program, you will acquire the necessary research qualifications in 3 semesters.

The world needs you: e.g. to develop new, environmentally friendly packaging materials or to perform research on urgently needed food and pharmaceutical products. Study Life Science Innovation and be the right person to help develop and test future exciting products. Last but not least, you will learn about the latest high tech research programmes, how to formulate targeted research proposals and how to publish your own research results.

FAQs

- **Why is this master's taught in English?**
This master's is taught exclusively in English because we want to accept German as well as international applicants. This is also a great preparation for future positions in English-speaking companies.
- **How many applicants do you accept?**
Every year, we accept at least 12 applicants.
- **What skills will I acquire?**
You will acquire comprehensive knowledge of product and process innovation. You will also gain a holistic view of industrial processes and acquire the ability to work independently on scientific problems, considering sustainability.

Look forward to your dream job

- in production companies in the life science industry (especially food, pharma, cosmetics)
- in process engineering or facility construction companies
- at universities and in research institutes (Fraunhofer Institutes, etc.)
- in our own research institutes

Curriculum

- 1
 - Business Development and Project Management
 - Data Management and Digital Transition
 - Elective Module
 - Packaging Materials and Processes
 - Innovation Management and Consumer Centricity
 - Research Laboratory

Elective Module

 - Hygienic Processing
 - Building Information Management
 - Related Degree Programs
- 2
 - Sustainability
 - Production Processes & Advanced Technologies
 - Elective Module
 - Standardization & Regulation in Life Science Industry
 - Planning of Research Proposals & Scientific Writing
 - Innovation Project

Elective Module

 - Food Service Design and Management
 - Life Science Logistics
- 3
 - Master Thesis

Why we're a good match

- Study full-time or part-time
- Participate in research projects at the Innovationscampus Sigmaringen. During your master's degree, you will have a wide range of contacts with our research groups in the field of life sciences
- Individual mentoring thanks to small groups
- Our own student pub right on campus, university sports, parties etc

Study in Sigmaringen

- Cheap accomodation near your campus
- Sports and outdoor activities such as swimming, climbing, mountain biking or canoeing
- Pleasant learning environment in small groups – here you are not just a number
- Regional companies with interesting projects and career prospects
